

Amendments to the specification:

Please replace the paragraph beginning at page 7, line 15, with the following rewritten paragraph:

--As shown in Fig. 4, each coil 18 extends parallel to the glove portion which is the plane defined by the page of Fig. 4. Thus, the width w of the coiled spring closure element is parallel to the glove. Each coil 18 then turns in a rounded manner perpendicular to the plane of the glove defining the thickness t of the coiled spring closure element.--
